REHAB REALITY

Personal Screening & Recovery Support Report

An educational summary to support informed conversations and next steps

Report ID	Generated	Assessment status
[Generated report ID]	[Date and time]	[Completed / Partial]

1. Your overview

This report summarizes information you provided during the Rehab Reality screening flow. It is intended to help you understand possible next steps and prepare for a conversation with a qualified professional. It is not a diagnosis.

Selected concern(s)	[Substance(s) selected by user]
Questionnaire	[Instrument name and version, or clearly marked demo questionnaire]
Screening outcome	[Outcome / score, only if valid scoring is implemented]
Interpretation	[Plain-language interpretation and limitations]

2. What this screening can tell you

[Insert a concise explanation of what the selected screening instrument measures, what the result may indicate, and what it cannot establish. Include the instrument's validated scoring interpretation only when implemented accurately.]

Important: A screening result does not confirm a diagnosis or determine the full extent of a person's health. A qualified healthcare professional can assess individual circumstances.

3. Photo and image-processing summary

Photo provided	[Yes / No]
Processing performed	[e.g., face presence, image quality or landmark positioning — only if actually computed]
Observations	[Only genuine, technically supported observations; otherwise state “No diagnostic image analysis performed.”]

A photograph cannot diagnose substance use, addiction, withdrawal, or internal organ damage. No such conclusion should be drawn from this image.

4. Recommended next steps

• **1. Speak with a qualified professional.** [Insert recommendation relevant to the user's reported concern and location.]

• **2. Share this report if useful.** Use it as a starting point for discussion; it does not replace a clinical assessment.

• **3. Identify a trusted support person.** [Insert practical, non-judgmental suggestion.]

• **4. Plan a follow-up.** [Insert an appropriate follow-up suggestion without promising a specific outcome.]

5. Support while at home

[Insert safe, general supportive steps relevant to the user's answers: maintaining routine, meals, hydration, sleep, reducing exposure to triggers, and involving a trusted support person. Do not provide a do-it-yourself detox protocol or medication instructions.]

Withdrawal safety: Stopping alcohol or sedatives suddenly can cause dangerous or life-threatening withdrawal in some people. Seek medical advice before making abrupt changes. Do not attempt unsupervised detox where medical support may be needed.

Urgent help: For suspected overdose, seizures, severe withdrawal symptoms, breathing difficulty, unconsciousness, or immediate danger, contact local emergency medical services immediately.

6. Professional and community support

Service	What it offers	How to contact
[Verified service name]	[Verified service description]	[Phone / website / hours]
[Verified service name]	[Verified service description]	[Phone / website / hours]

Only verified, region-appropriate services should appear in the generated report. Emergency services, mental-health helplines and addiction-treatment providers must be clearly distinguished.

7. References and further reading

8. Important information and disclaimer

This report is educational and for screening support only. It is not a medical diagnosis, treatment plan, or substitute for assessment by a qualified health professional. Screening tools have limitations and results should be interpreted in context. Health outcomes vary between individuals. Do not use this report alone to make decisions about stopping substances, medication, or treatment.
